

Aizon Unify

Accelerated Batch Release

Customer: Custom Manufacturer of Active Pharmaceutical Ingredients

As a manufacturer of intermediates for many of the world's elite pharmaceutical companies, the customer's unique differentiator is that they solve problems through technology and innovation to reliably deliver quality products that save and improve lives. As part of their strategic technology investment, they use Aizon's Platform and Solutions to help alleviate the bottlenecks in their manufacturing and batch release processes in order to speed up production while ensuring top notch quality and on time delivery.

The Challenge

The team had to run and re-work multiple reports, combine data from disparate data sources, and spend time chasing data to answer questions like:

- Are there outstanding variances?
- Are there open investigations?
- Is testing complete?
- What products are taking the longest to finish production?

It could take hours to days to answer questions like this, eliminating the ability to make valuable decisions in real time.

Aizon in Action

The Solution

Aizon's solution takes away the manual steps and data chasing by unifying many of the organization's disparate data sources (Oracle, Asset Management, Master Control, LIMS, CRM, MES, PLM, etc.).

Aizon's solutions provide data transparency to internal stakeholders, and eventually will be available to their customers (Sponsors). Having visibility to contextualized data gives the 20+ Project Managers and Quality personnel the ability to oversee the multitude of QA and QC test procedures for a particular product, group of products, or the entire portfolio. With immediate insight into deviations and variances or outstanding investigations, the Project Managers can intelligently schedule the different QA/QC steps and expedite the final release of the batch.
